

Secure 2 Fiber

We offer the
**FUTURE
SOLUTION**
FOR IT INFRASTRUCTURE

Maximum flexibility
for critical networks

AIM Firewall Module

The AIM Firewall module for secure networks

Dashboard overview of all firewall providers integrated into the system. Ideal for heterogeneous infrastructures.

Monitoring - Real-time display of critical metrics:

- Vendor, IP, FQDN for clear device identification
- Resource status: disk usage, CPU utilization, RAM availability
- Interface traffic with bandwidth analysis per interface

Asset Maintenance

- Version tracking: Active firewalls with installation status and update capability
- Automated overview when new firmware is available
- Direct update control: Select and initiate updates in the system
- Update times: are directly added to the maintenance calendar

Certificates

- Certificate management: Overview of all CA certificates and end certificates
- Expiration monitoring: Email notification of impending expiration

Migration

- Firewall object transfer: Seamless transfer of aliases, gateways, and VLANs between devices
- Compatibility check: Ensure compliance during transfer
- "Security in focus – from monitoring to migration."
